

Production Manager

Function: Manufacturing

OVERALL IMPACT

M

The Production Manager supervises production staff to ensure production targets are met and supports co-ordination of day-to-day production operations. He collates and analyses production and budget data and resolves production-related issues. He implements policies and procedures and recommends improvements to increase efficiency and productivity in production methods.

KEY TASKS	FUTURE VIEW OF TASKS (3 – 5 YEARS)		REQUIRED SKILLS
Fulfil production targets within budget	L	<ul style="list-style-type: none">Apply smart workflows to match supply needs to production outputLeverage manufacturing software to trigger resource allocation to meet production targets	<div>TECHNICAL SKILLS</div> <ul style="list-style-type: none">Data Analytics System DesignBig Data AnalyticsGreen Manufacturing Design and ImplementationEnvironmental Management System Framework Development and ImplementationOperational Risk Management <div>CRITICAL CORE SKILLS</div> <ul style="list-style-type: none">Adaptability
Optimise manufacturing processes	M	<ul style="list-style-type: none">Integrate IoT and robotics technologies to streamline manufacturing processesConfigure software and digital dashboards to suit different manufacturing environments for more accurate data collection and analysis
