

Supply Planner

Function: Planning

OVERALL IMPACT **M**

The Supply Planner supports the Supply Planning Manager and determines the replenishment needs based on demand forecasts and identifies and resolves exceptions by expediting orders and reallocating inventory. He also closely monitors timely delivery and availability of products in accordance with the inventory plan and ensures that inventory strategies are incorporated into updated supply plans.

KEY TASKS	FUTURE VIEW OF TASKS (3 – 5 YEARS)		REQUIRED SKILLS
Creating and Implementing Forecasts	M	<ul style="list-style-type: none">Leverage advanced software to run predictive analytics models using AI/ML technologiesFluidly adapt to new software and apply digital tools to execute analysis and forecasts. More time will be dedicated to configuration and software checks.	<div>TECHNICAL SKILLS</div> <ul style="list-style-type: none">Big Data AnalyticsWorkflow DigitalisationCarbon Footprint ManagementBusiness Continuity Planning <div>CRITICAL CORE SKILLS</div> <ul style="list-style-type: none">Decision MakingGlobal Perspective
Identify and continuously refine forecast drivers	L	<ul style="list-style-type: none">Work with more data variables to develop stronger foresight in identifying potential forecast driversConsolidate key data-backed forecast drivers into a digital dashboard for continuous supervision and decision making
